

S MICROMOBILITY SAFETY

1 DID YOU KNOW?

The accessible and portable nature of micromobility devices, such as bicycles and scooters, makes them a great and affordable way to stay active and greener, however, this also makes them easy targets for theft.

2 YOU CAN PREVENT THIS!

You can prevent unfortunate circumstances from happening by:

- Remaining alert when operating your device, and always wear the appropriate protective equipment.
- Ensuring you park your device in a well-lit, high-traffic, authorized location preferably near a camera.
- Securing your device with a bolt-cutter-proof locking mechanism and removing key components of your device if it allows (such as the seat).
- Do not hang or leave peripheral items such as helmets or personal belongings on your device.
- Giving your device a makeover! Whether it's a sticker, or something unique to make it easily identifiable if it is stolen.
- Tagging your device with a tracker, or **registering your device with the police.**

3 NOW WHAT?

If you suspect you have been a victim of theft, ensure you document all your findings and report your concern to your local police department.

If an incident occurs on-site, please report it to security.
