

BES Bridging - Practicum & Lab

Published 8/5/2023 by [Amy Koning](#)

The Building Environmental Systems (BES) Operator Class II bridging program provides students with a valuable hands on learning experience. These students are attending their practical courses on campus, learning about technologies and building operations in the labs at Seneca.

Hands on learning and practical experience is needed by every student to grasp the knowledge learned from their online program. Students are getting hands-on experience with equipment and systems used in the field of Building Operations. This helps to improve diagnostic and troubleshooting skills in the work environment. Tours of Seneca's building systems and facilities is also part of the experience.
