Bugs

First off congratulations, this platform is a huge improvement.

I tried to set up my profile, but noticed in /myaccount that there where two links/buttons beside my icon

One reading "Ava Ardiel" and the other reading "Edit Profile"

The problem is that the "Edit Profile" doesn't go anywhere and the "Ava Ardiel" goes to the ANOTHER account page, and to get to the actual editor you have to click on the camera icon.

(The camera icon that says "Change photo" does not, in fact lead to an option to change your photo)

(One could also skip the use of that icon all together and just have the user click on their image, and if needed have a semi-transparent icon appear in the middle of their image to indicate a button with said camera icon)

I also noticed the CSS code not working properly around the nav bar on the side of the screen in the editor

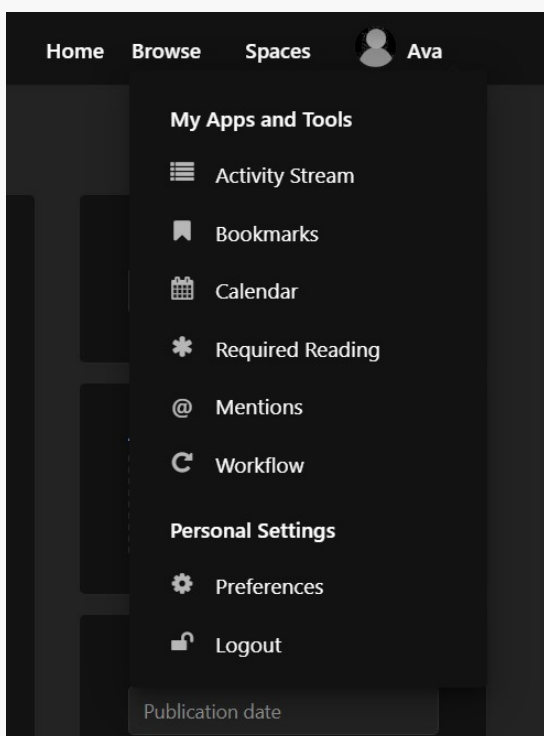

If you click them in the right order they all become selected.

(page in question is /myaccount/edit-profile/#%2F%23profile-photo-and-avatar)

Lastly, in the main nav bar that sticks to the top of your page at all times there is a profile section

Said section activates a dropdown with a "Preferences" option under the "Personal Settings" header.

Why not include preferences in profile editor and vice versa?

That way there is one place with all the settings instead of two with different ones.

(The page in question is /myaccount/preferences)

All that being said the website looks very good, and having a space for students to connect was a great idea.

I hope that this helps!

-Ava
