Seneca applied research project helps fight off cyberattacks

Published 7/28/2022 by Tiffany Hsieh

Fighting off cyberattacks could soon be as easy as plugging a small device into your home wireless network.

With more people working from home, residential computer networks have become gateways to larger networks and a bigger target for hackers. In response, a team of Seneca applied researchers has developed a solution that enables an enterprise-class security system to be easily deployed in a home or small office — protecting both the local and connected corporate networks.
