

Building Environmental Systems (BES™) Accelerated Bridging Program

Published 9/16/2021 by [Gerald Encabo](#)

The Program

Seneca's Building Environmental Systems programs are designed to train technicians in the operation of today's complex buildings. These programs focus on the concept that "buildings are systems", in which heating, air conditioning, refrigeration, ventilation, electrical power, lighting, water and air supply are not isolated, but connected and interdependent.

Offered in fast-paced, part-time, employment-focused format, this certificate program will provide students with an understanding of the interrelated complexities of building environmental systems and help students to launch a professional career in Building Operations & Facilities Management industry in the shortest time possible.
